

Chief Integrity Inspector

THE COMPANY

Headquartered in Calgary, Alberta and with operations near Fort St. John, British Columbia, Pacific Canbriam Energy Limited ("PCE") is committed to our 5Cs business philosophy of creating benefits for our Community, Country, Climate, Customer, and Company.

PCE believes that the quality of its resource is a strategic asset that differentiates the company. Early efforts to identify a scalable, low cost supply source led to a focus in the Altares and Kobes Montney regions in northeast B.C. The Montney is a world class resource and Altares is among the highest quality areas. The region possesses a unique combination of thickness and over-pressure, which contributes to highly efficient stacked resource development and strong well deliverability. Pacific Canbriam's Montney resource also possesses a high liquids content and overall rock quality that translates into a highly competitive supply cost.

We believe that teamwork is the foundation of our success. We have established a culture where problem solving skills and critical thinking are highly valued. Individual technical disciplines collaborate to achieve common objectives and continuously improve results. PCE's strategy and its culture are centred on this commitment.

The next iteration of our integrated approach relates to the planned export of our natural gas to markets in growing economies overseas. To achieve this aim, PCE will supply B.C.'s proposed Woodfibre LNG project, which will liquefy the natural gas and load it into vessels. The natural gas will be shipped to help supply a growing demand for cleaner sources of energy in Asia.

THE POSITION

PCE is currently seeking a Chief Integrity Inspector, based out of the Ft. St. John office (Monday-Friday work schedule). Consideration may be provided for this to be a Calgary based role, with routine travel to FSJ. Reporting to the Operations Manager, this position supports the safe delivery and execution of Integrity Programs. Responsible for implementation of the integrity programs for pressure vessels, pressure piping systems, tanks, and pipelines in accordance with Technical Safety BC (TSBC), BCER regulations, PCE policies, procedures, and standards to ensure risk mitigation and compliance. Ensure safe operating of equipment that complies with PCE and regulatory board requirements.

Key Responsibilities

- Support and comply with the policies, goals, efforts, and programs of PCE's Health, Safety and Environmental (HSE) Management System.
- Coordination of activities to ensure compliance with PEIMS, IMPP and IMPF
- Responsible for the implementation and execution of corrosion monitoring and mitigation programs
- Liaise with regulatory field inspectors for matters concerning Integrity
- Conduct inspections and integrity assessments of pressure vessels, pressure relief devices, pressure piping, boilers, tanks, and pipelines
- Develop and maintain accurate equipment records utilizing current corporate databases and systems
- Engage on any reactive situations that arise

- Conduct PSV installation inspections in real time
- Field verification of equipment – Status of each wellsite location, along with as-building and inventory of equipment to feed back to the integrity database
- Represent and be fully engaged with Integrity-related maintenance work including weekly scheduled items and/or annual inspection list
- Coordinate adhoc inspection activities and NDE inspections
- Establish strong working relationships with all operations staffs including plant and field operators
- Audit PSV & Mechanical contractors through routine shop visits
- Develop Inspection Test Plans (ITP's), Repair Plans, Technical Bulletins, and Inspection Memos to ensure code and regulatory compliance
- Manage/review equipment and PSV inspection reports to set future inspection intervals.
- Develop and deliver training to support the execution of integrity programs
- Provide technical expertise to assist with troubleshooting new and recurring problems. Work with operations, engineering, maintenance, and construction teams to determine root cause and implement cost effective solutions
- Conduct/participate/support program audits and work to ensure close out of actions items
- Actively participate in MOC's, RCA's, and RA's as required
- Support construction to achieve integrity program compliance on field executed capital projects.

THE INDIVIDUAL

About You

- Strong organization, time management and interpersonal skills and the ability to work effectively with diverse teams across the business
- Excellent verbal and written communication skills
- Extremely detail oriented
- Ability to work independently with minimum supervision in the execution of their duties.
- Personal commitment to HSE and the demonstration of self-leadership capabilities

Qualifications

- API 510 – Pressure Vessel Inspector certification
- Engineering Technologist or Welding Engineering Technologist
- API 653 & 570 certification and working knowledge of CSA & ASME Codes
- ABSA/TSBC certification as an “In-Service Pressure Vessel Inspector” is preferred
- ABSA National Board Commissioned Inspector
- Experience with inspection, construction, repair, or maintenance of pressure equipment
- NACE training or certification in corrosion control, cathodic protection, coatings, etc. is ideal
- Strong knowledge of field operations, equipment and processes
- Strong PC skills (Microsoft Office, Adobe, Outlook, etc)
